

Facilities Issue Intake and Escalation

NU-OPS-003	Document ID: NU-OPS-003	Status: current
Version: 2.0	Effective date: 2024-09-21	Access scope: site_operations
Site scope: all_sites		

Northstar Urgent Care Cooperative (NUCC)

Status: Current · Version: 2.0

Issue date: 15 September 2024 · Effective date: 21 September 2024 · Review by: 21 September 2025

Applies to: Harbor Point, Alder Creek, and Northgate · Access scope: site_operations

Fictional educational test material. This procedure covers non-clinical facilities and workspace issues only. It does not provide clinical, emergency-response, or patient-care guidance.

1. Scope and issue categories

Use this procedure to record and route a condition involving the building, fixtures, utilities, shared workspace, or other non-clinical site facilities. Examples include a door or lighting fault, a water leak, loss of a building service, a damaged shared fixture, or a facilities vendor follow-up.

This procedure does not determine whether a site may continue any clinical activity, establish a clinical response, or replace a separate incident-reporting process. If the same event meets both the facilities-issue definition here and the workplace-incident definition in NU-OPS-011, create both applicable records. Cross-reference only the non-sensitive facilities ticket ID and incident ID; do not copy sensitive incident details into the facilities log.

Approval and precedence: Approved by the Director of Operations on 15 September 2024 and effective 21 September 2024, this procedure supersedes NU-OPS-016 for facilities issue intake, routing, escalation, and follow-up. NU-OPS-016 remains available for historical questions about its prior period.

2. Open a facilities issue record

The staff member who first identifies the issue, or the site lead who receives the report, opens or updates the site's facilities issue log. Use one entry per distinct issue. Record facts that are known; label estimates and unconfirmed details as such.

Minimum intake fields:

- Site and specific area or fixture.
- Date and time observed, and reporter's role (no personal contact details needed in the shared log).
- A short factual description of the condition.
- Whether the condition is ongoing, intermittent, or no longer observed.
- Any immediate non-clinical steps already taken and who owns the next step.
- Priority category and the reason it was selected.

- Central routing destination and time sent; add the ticket or message reference when available.
- Status, next update owner, and closure note.

Do not record speculation as a confirmed cause. Avoid adding unnecessary personal or sensitive details. If information is missing, mark it “not confirmed” rather than filling the gap by assumption.

3. Priority categories

Select the category based on the observed operational effect. The category sets the routing sequence; it does not promise a response time or determine site service availability.

Category	Use when	Initial routing
Immediate coordination	An observed facilities condition is affecting a site’s ability to coordinate its non-clinical operations, or may worsen before ordinary follow-up	Notify the local site lead and Facilities Coordinator promptly using the routes in NU-OPS-007. For a building-wide or cross-site interruption, also notify the Director of Operations. Record what is known and what remains unconfirmed.
Priority follow-up	A facilities issue needs central action or tracking, but no immediate site-wide coordination need is identified	Send the issue record summary to the Facilities Coordinator and notify the site lead. The Facilities Coordinator assigns the follow-up owner.
Routine	A repair, inspection, or workspace request can be placed in the normal queue without an observed immediate operational effect	Send the request to the Facilities Coordinator and retain the entry in the site log. The Facilities Coordinator records the queue status or requests missing information.

These categories are the approved administrative routing labels for this corpus. Do not use them to assess health, safety, or clinical risk. If a condition requires a separate emergency or clinical response, this procedure does not specify that response; follow the applicable separate process and do not delay it to complete a facilities ticket.

4. Routine routing path

1. The reporter gives the site lead the location and factual description, if the reporter is not entering the issue directly in the site log.
2. The site lead or reporter records the minimum intake fields and selects a priority category with its basis.
3. Route the issue to the **Facilities Coordinator** at `facilities-desk@northstar-uc.example.invalid`. Include the site, issue-log reference, priority and basis, observed status, and next requested action.
4. For a time-sensitive site impact, copy the site’s role mailbox listed in NU-OPS-007. For an issue affecting multiple sites or requiring organization-wide coordination, also notify the **Director of Operations** at `operations-director@northstar-uc.example.invalid`.
5. The Facilities Coordinator acknowledges the routing in the issue record, assigns or records the next owner when known, and requests clarification if required fields are missing.

The role-based destinations are fictional routing labels. NU-OPS-007 is the directory for site lead routes and role descriptions. This procedure does not assign approval authority for expenditures, vendor work, building access, or changes to site operations.

5. Immediate coordination and unavailable routes

When “Immediate coordination” applies, notify the local site lead and Facilities Coordinator; add the Director of Operations for a building-wide or cross-site interruption. State the observed effect, site, time last confirmed, actions already taken, and who will provide the next update. Do not estimate a restoration time unless a responsible owner has confirmed one, and identify the source and time of any confirmed estimate.

If the ordinary route is unavailable or the issue is found outside the local team’s normal handoff, use the after-hours path in NU-OPS-007: send the summary to the Operations Desk Coordinator at `operations-desk@northstar-uc.example.invalid` and the relevant central route, and include the local site lead route when local coordination is needed. Record the attempted destination and time in the issue log. The directory does not establish an on-call roster, monitoring hours, or response-time commitment. Do not invent a substitute contact.

If no listed route fits, send the gap and issue-log reference to the Operations Desk Coordinator. Keep the issue marked open until an owner or next step is recorded; a sent message alone does not establish resolution.

6. Status updates and closure

The Facilities Coordinator is the central follow-up owner unless another owner is explicitly recorded. The site lead maintains the local issue-log entry and records confirmed changes in condition. Each update should include the time, source or responsible role, current status, and next owner. Mark a report as “awaiting confirmation” when a message has been sent but no reply has established an action or completion.

Close the issue only when the assigned owner records the disposition and the site log contains:

- The completed action, cancellation reason, or documented transfer to another process.
- The date of disposition and role confirming it.
- The site’s observed status after the action, if applicable.
- Any remaining follow-up, with its owner and due date if one was explicitly agreed.

If work remains, keep the entry open or mark it “monitoring” with a named role responsible for the next update. Do not infer completion from elapsed time or lack of a new report.

Illustrative issue lifecycle (fictional example)

This example connects the intake, routing, status, and closure fields above. Its dates and event are fictional; timestamps illustrate record entries only and are not response-time targets or service promises.

Record point	Illustrative entry
Intake	<code>FAC-HP-2024-10-02-01</code> ; Harbor Point, administrative work area; 2 October 2024, 08:10; a cabinet hinge is loose. Ongoing; no immediate operational effect observed. Reporter role: site operations staff.
Priority and route	Routine, because no immediate operational effect is observed. Site lead sends the issue summary and log reference to the Facilities Coordinator at <code>facilities-desk@northstar-uc.example.invalid</code> ; the route and time sent are recorded.
Status update	At 08:25, the log records “awaiting confirmation,” the Facilities Coordinator as next update owner, and that no reply has yet established an action. This timestamp is illustrative only.

Record point	Illustrative entry
Follow-up	On 3 October, the Facilities Coordinator records the assigned follow-up owner and status "monitoring." The site lead records the observed condition and next owner in the local log. No repair approval or vendor authority is implied by this entry.
Closure	On 4 October, the responsible owner records the disposition and confirming role; the site lead notes the observed condition after the action. The log is closed only after the disposition and remaining follow-up, if any, are recorded.

This illustrative record does not establish a priority rule beyond the categories already defined, a response deadline, or an authorization to perform work.

7. Escalation directory reference

Use NU-OPS-007, *Site Contact and Escalation Directory*, as the current source of fictional role routes. If a contact is absent, a route appears inconsistent, or a mailbox is unavailable, record that fact and request confirmation from the Operations Desk Coordinator. This procedure does not establish a telephone number, personal contact, alternate vendor route, or response guarantee.

8. Revision record

Version	Issued	Effective	Change	Approval
2.0	2024-09-15	2024-09-21	Replaces the prior facilities issue routing procedure; adds defined intake fields, priority categories, and role-based escalation through NU-OPS-007.	Approved by Director of Operations on 2024-09-15

Owner: Facilities Coordinator, Northstar Urgent Care Cooperative.
Next review: 21 September 2025.
